

Introduction

The LogiCORE™ IP Common Public Radio Interface (CPRI™) core is a high-performance, low-cost flexible solution for implementation of the CPRI interface. It uses state-of-the-art transceivers to implement the Physical Layer. A compact and customizable Data Link Layer is implemented in the FPGA logic.

Additional Documentation

A product guide is available for this core. Access to this material can be requested by going to the [CPRI Documentation Lounge](#).

Features

- UltraScale architecture-based device designs operate at line rates of 614.4, 1,228.8, 2,457.6, 3,072, 4,915.2, 6,144, 8,110.08, 9,830.4, 10,137.6, 12,165.12, and 24,330.24 Mb/s using GTHE3, GTYE3, GTHE4 or GTYE4 transceivers. 24,330.24 Mb/s line rate with optional RS-FEC supported using GTYE3 or GTYE4 transceivers.
- Zynq-7000, Virtex®-7, and Kintex®-7 device designs operate at line rates of 614.4, 1,228.8, 2,457.6, 3,072, 4,915.2, 6,144, 9,830.4, 10,137.6, and 12,165.12 Mb/s using GTXE2, GTHE2 transceivers.
- Artix®-7 devices designs operate at line rates of 614.4, 1,228.86, 2,457.6, 3,072, 4,915.2, and 6,144 Mb/s using GTPE2 transceivers.
- UTRA-FDD in-phase and quadrature-phase data (I/Q) module supporting 1 to 48 Antenna-Carriers per core.

LogiCORE IP Facts	
Core Specifics	
Supported DeviceFamily ⁽¹⁾	UltraScale+™ UltraScale™ Zynq®-7000 All Programmable SoC ⁽²⁾ 7 Series ⁽³⁾
Supported User Interfaces	Generic data, status, configuration and management interfaces, AXI4-Lite management interface
Provided with Core	
Design Files	Encrypted register transfer level (RTL)
Example Design	VHDL
Test Bench	VHDL
Constraints File	Xilinx Design Constraints (XDC)
Simulation Models	VHDL, Verilog
Supported S/W Drivers	N/A
Tested Design Flows ⁽⁴⁾	
Design Entry	Vivado® Design Suite
Simulation	For supported simulators, see the Xilinx Design Tools: Release Notes Guide .
Synthesis	Vivado Synthesis
Support	
Provided by Xilinx at the Xilinx Support web page	

Notes:

1. For a complete list of supported devices, see the Vivado IP catalog.
2. Excludes the Zynq-7000 010 and 020 devices.
3. Excludes the Artix-7 100T device in CSG324 and FTG256 packages.
4. For the supported version of the tool, see the [Xilinx Design Tools: Release Notes Guide](#).

Features (continued)

- Automatic speed negotiation
- Supports both Fast (Ethernet) and Slow High-Level Data Link Control (HDLC) Control and Management (C&M) channels per the *CPRI Specification v7.0* [Ref 1].
- Can be configured as a master or slave at generation time. Master core can be switched to operate as a slave through a configuration port.
- Suitable for use in both Radio Equipment Controllers (RECs) and Radio Equipment (RE), including multi-hop systems.
- Easy-to-use interface for in-phase (I) and quadrature-phase (Q) data and synchronization together with optional modules for UMTS terrestrial radio access - frequency division duplexing (UTRA-FDD) and Evolved UMTS Terrestrial Radio Access (E-UTRA) data mappings. interface
- Supports both Ethernet and HDLC Control and Management channels
- Supports vendor specific data transport including support for the passing of control AxC information in global system for mobile communications (GSM) systems
- Delay measurement capability meets CPRI Requirement 21 per *CPRI Specification v7.0* [Ref 1]
- Includes the necessary clocking and transceiver logic to enable easy integration into your design
- Synthesizable example design and simple demonstration test bench provided
- Delay measurement capability meets CPRI Requirement 21 per CPRI Specification v7.0 [Ref 1]
- Optional Reed-Solomon Forward error correction (RS-FEC) supported at 8,110.08, 10,137.6, 12,165.12 and 24,330.24 Mb/s line rates.

Overview

The CPRI core implements Layer 1 and Layer 2 of the CPRI specification in UltraScale architecture-based, Zynq-7000, Virtex-7, Kintex-7, and Artix-7 devices. The CPRI core provides these client-side interfaces.

- **I/Q Interface.** Consists of a stream of radio data (I/Q samples) that is synchronized to the Universal Mobile Telecommunications System (UMTS) radio frame pulse.
- **Synchronization Interface.** Provides the means for the client logic to synchronize to the network time by transmitting the UMTS radio frame pulse and clock frequency.
- **High-Level Data Link Control (HDLC) Interface.** Transports management information between master and slave. The HDLC interface is serialized and synchronous.
- **Ethernet Interface.** When configured to support speeds of up to 3,072 Mb/s, the Ethernet interface is presented as a Media Independent Interface (MII); this allows a 100 Mb Ethernet Media Access Controller (MAC) to be attached to the core to provide a high-speed channel for

management information. When speeds over 4,915.2 Mb/s are supported, a Gigabit Media Independent Interface (GMII) option is available. This allows a 1 Gb Ethernet MAC to be attached to the core. The core includes an Ethernet frame buffer in both transmit and receive directions. The frame buffers are derived from the FIFO Generator and Block Memory Generator IP cores.

- **Vendor-Specific Data Interface.** Provides client logic access to the vendor-specific sub-channels in the CPRI stream.
- **Management Interface.** Provides control and status registers that allow management of the entire design from a supervisory processor. An AXI4-Lite option is available.

The architecture of the core is shown in [Figure 1](#). In addition to the interfaces described previously, the core contains these blocks:

- **Status/Alarm Block.** Reflects the internal state of the core and the state of the link.
- **Start-up Sequencer.** Performs line-rate negotiation and Control and Management (C&M) parameter negotiation at link start-up. This block continuously monitors the state of the link and sends the status to the alarm block.
- **UMTS Terrestrial Radio Access - Frequency Division Duplexing (UTRA FDD) I/Q Module:** A pluggable I/Q module to support multiplexing and demultiplexing of I/Q samples in UTRA FDD systems (shown in [Figure 1](#)).
- **Evolved UMTS Terrestrial Radio Access (E-UTRA) I/Q Module:** A pluggable I/Q module to support multiplexing and demultiplexing of I/Q samples in E-UTRA systems (not shown in [Figure 1](#)).
- **Legacy raw I/Q Module:** A pluggable I/Q Module for backward compatibility with the raw interfacing timing for v1.x CPRI cores (not shown in [Figure 1](#)).

Technical Support

Xilinx provides technical support at the [Xilinx Support web page](#) for this LogiCORE™ IP product when used as described in the product documentation. Xilinx cannot guarantee timing, functionality, or support if you do any of the following:

- Implement the solution in devices that are not defined in the documentation.
- Customize the solution beyond that allowed in the product documentation.
- Change any section of the design labeled DO NOT MODIFY.

To contact Xilinx Technical Support, navigate to the [Xilinx Support web page](#).

Licensing and Ordering Information

This Xilinx LogiCORE IP module is provided under the terms of the [Xilinx Core License Agreement](#). For full access to all core functionalities in simulation and in hardware, you must purchase a license for the core. Contact your [local Xilinx sales representative](#) for information about pricing and availability of Xilinx LogiCORE IP.

For more information about the CPRI core and about obtaining a license, visit the [CPRI product page](#).

Information about this and other Xilinx LogiCORE IP modules is available at the [Xilinx Intellectual Property](#) page. For information on pricing and availability of other Xilinx LogiCORE IP modules and tools, contact your [local Xilinx sales representative](#).

Related Information

Xilinx products are not intended for use in life-support appliances, devices, or systems. Use of a Xilinx product in such an application without the written consent of the appropriate Xilinx officer is prohibited.

Revision History

Date	Version	Revision
05/04/2017	8.7	<ul style="list-style-type: none"> Added speed switching to the 10,137.6 Mb/s capable cores Added the watchdog timer register Added the transceiver data monitor interface
10/05/2016	8.7	<ul style="list-style-type: none"> Added 24,330.24 Mb/s support for GTYE4-based devices Added Reed-Solomon Forward Error Correction
04/06/2016	8.6	<ul style="list-style-type: none"> Added 24,330.24 Mb/s support with a 64-bit datapath option Added 12,165.12 Mb/s to Kintex-7, Zynq-7000 and Virtex-7 devices Added debug register and enhanced FIFO transit time registers.
11/18/2015	8.5	<ul style="list-style-type: none"> Added support for UltraScale+ families. Added support for GTYE3, GTHE4, and GTYE4 transceivers. Added 12,165.12 Mb/s support. Replaced <i>CPRI Specification v6.0, August 30, 2013</i> with <i>CPRI Specification v6.1, July 1, 2014</i>.
10/01/2014	8.3	10136.7 Mb/s speed switching added.
06/04/2014	8.2	Associated Product Guide (PG056) updated with parameter table.
04/02/2014	8.2	Added 10137.6 Mb/s line rate
12/18/2013	8.1	<ul style="list-style-type: none"> Added UltraScale architecture support Added transceiver debug interface
10/02/2013	8.0	<ul style="list-style-type: none"> Revision number advanced to 8.0 to align with core version number Added option to bypass the Ethernet frame buffers
03/20/2013	3.0	Updated for Vivado Design Suite and core version 7.0. Removed all ISE design tools and architectures not supported for Vivado.
12/18/2012	2.0	Updated for ISE Design Suite 14.4, Vivado Design Suite 2012.4, and core version 6.1.
07/25/2012	1.0	Initial Xilinx release. Replaces ds611. Data sheet information was incorporated into the new product guide, pg056.
